

What is claimed is:

1. A lantern detachable cap comprising: a fixing member fixed to a peak of the cap; a moving manipulate member having a body, an extension portion, and a connecting portion, the moving manipulate member being connected to and moved along the fixing member; and a pressing member being connected to the moving manipulate member and controlling the manipulate member,

wherein a clip part having a shape of circle is provided at a lower end of the extension portion formed at the connecting portion of the moving manipulate member, and

wherein a lantern is attached to and detached from the clip, the lantern has a shape of cylinder, a battery is loaded within the lantern, and an on/off switch is protruded from one side of the lantern.

2. The lantern detachable cap according to claim 1, wherein the clip part comprises a pair of clips and is formed at the lower end of the extension portion of the moving manipulate member.

3. The lantern detachable cap according to claim 1, wherein the clip part comprises a single clip and is formed at the lower end of the extension portion of the moving manipulate member.
